Introduction

+ Image Hiding

Previous Work - Embedding

Cover diff. image

size = 1/2 of cover image

size = cover image

Previous Work — Adjust the cover diff. Image

Rang^e/table:  index | 1 | 2 | ... | | n |
 Non-uniform quantization

Example

0~15 *16~31* *32~47* *48~63*

index	1	2	3	4	...
-------	---	---	---	---	-----

No.cover diff.	32	63	110	239	...
----------------	----	----	-----	-----	-----

No.secret diff.	35	55	115	235	...
-----------------	----	----	-----	-----	-----

Adjusted No. of cover diff.	35	55	115	239	...
-----------------------------	----	----	-----	-----	-----

Previous Work — Replacement

Extra table
(index value of secret diff.):

copy

10					
		11			

Secret diff. image

RNG(79):

seed
{ 41, 59, 6, 17, 25, ..., 113, 79, ... }
location

r_1 r_3 r_6 r_2 r_5 r_1 r_3

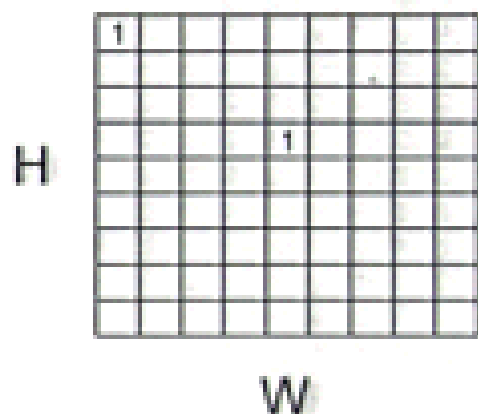

Adjusted cover diff. image

				9	
			10	10	
					9
	12				
				12	
			11		9
				11	

Previous Work — Size of the extra table

Extra table
(index value of secret diff.):

Size = $H \times W \times \log n$,
where n = number of ranges

Ex. $n=16$

Size = $H \times W \times 4$
